

1. Medical Practices

Practice Size and Operational Character

Category A — Small / Single-Provider Practices (1–3 Providers)

Primary Focus

These practices are often led by physicians who are deeply respected within their communities. Many have been operating for years, sometimes decades, with a stable patient base built on reputation, continuity, and personal rapport. Their success is rooted in consistency and the quality of their patient relationships.

Operationally, these practices tend to be lean. Administrative responsibilities are frequently handled by a small in-house team or directly by the physician themselves. Great importance is placed on **politeness, attentiveness, and reliability** — both in patient interactions and in the day-to-day functioning of the practice behind the scenes.

For these practices, H& Virtuals supports the preservation of what already works by absorbing administrative load in a measured and unobtrusive way. Calls are handled with care, records are maintained accurately, and systems are kept running smoothly so they remain in the background. The effect is felt quickly: fewer interruptions, calmer workflows, and more space for the physician to remain focused on care.

Core characteristics

- Long-standing presence within a local community
- Physician-led with strong personal reputation and patient trust
- Stable and loyal patient base built over years or decades
- High emphasis on continuity of care and personal relationships

Operational orientation

- Lean internal structure with minimal administrative layers

- Physician often directly involved in operational and administrative decisions
- Small, close-knit support staff with informal role boundaries

What they are looking for

- Calm, predictable day-to-day operations
 - Polite, respectful handling of patients and communications
 - Reliability in administrative execution
 - Support that preserves existing routines and standards
 - Fewer interruptions and reduced cognitive load
-

Category B — Medium Practices (3–5 Providers)

Primary Focus

Practices in this category share much of the same ethos as Category A, while beginning to look ahead. These are often physician-owned operations where one or more partners have taken early steps toward expansion. This may include opening an additional location, extending hours, or broadening the scope of services offered.

The mindset remains strongly relationship-driven, complemented by an emerging business orientation. As growth begins, pressures surface around coordination, workflow consistency, staffing costs, and system reliability.

H& Virtuals integrates naturally at this stage by introducing **structure that supports momentum**. Remote staffing and managed services bring discipline, reporting, and continuity while reinforcing the interpersonal tone that defines the practice. The emphasis is on **steady progression**, allowing the organization to grow while remaining true to the culture and values that established its reputation.

Core characteristics

- Physician-owned practices with early expansion intent
- Strong interpersonal culture carried over from smaller practice stage
- Growing confidence in operational and business decisions

Operational orientation

- Initial expansion activities (additional location, extended hours, broader services)
- Early signs of strain in coordination and workflow consistency
- Increasing dependence on systems and processes

What they are looking for

- Stability during growth
 - Consistency across people, locations, and schedules
 - Better coordination without cultural disruption
 - Clear ownership of non-clinical responsibilities
 - Operational support that keeps pace with momentum
-

Category C — Mid-Market Practices (5–10 Providers)

Opportunistic Focus Only

Practices within this range are often navigating a period of transition. Over time, processes, systems, and team structures have evolved in layers, reflecting earlier stages of growth. These environments typically hold a mix of established habits, long-serving staff, and tools adopted at different points in the organization's history.

Operational challenges are part of the landscape, and leadership awareness around the need for simplification and alignment varies. Engagements with H&J in this category tend to be most effective when they are thoughtfully scoped — focusing on specific functions or phased support that complements the organization's existing direction.

Core characteristics

- Practices shaped by multiple growth phases
- Leadership structures beginning to formalize
- Mix of legacy practices and newer systems

Operational orientation

- Layered processes built over time
- Long-serving staff alongside newer hires

- Tools and workflows adopted at different stages of growth

What they are looking for

- Simplification of complex operations
 - Alignment across teams and functions
 - Incremental improvement rather than wholesale change
 - Support that fits within existing structures
 - Selective relief in specific operational areas
-

Category D — Enterprise Practices (10+ Providers)

Expansion Focus

Enterprise-level practices operate with defined management layers, established reporting structures, and clear accountability frameworks. Decision-making is distributed across roles and departments, and vendor relationships are built on trust developed through performance, transparency, and consistency over time.

In these environments, H& Virtuals is engaged for its **reliability, governance, and repeatability**. Attention centers on delivery assurance, performance visibility, and the ability to scale services predictably. These relationships contribute to the organization's long-term financial strength, supporting stability and sustained expansion as the H& Virtuals platform matures.

Core characteristics

- Multi-layered organizational structure
- Clearly defined management and leadership roles
- Formalized governance and accountability

Operational orientation

- Standardized reporting and performance tracking
- Multiple vendors and service partners
- Established procurement and evaluation processes

What they are looking for

- Reliability and consistency at scale

- Clear reporting and performance visibility
 - Predictable service delivery
 - Strong governance and compliance alignment
 - Long-term operational dependability
-

Specialty Coverage and Operational Alignment

Core Medical Practice Specialties

- Psychiatry, primary care, internal medicine, and family medicine
 - High reliance on consistent administrative execution and system reliability
 - Strong alignment with defined job roles and service blocks
-

Parallel Clinical and Wellness Practices

- Dental practices, chiropractic clinics, wellness operations, and assisted living administration
 - Comparable non-clinical workflows across scheduling, documentation, and coordination
 - Supported through the same managed operational structures with contextual adjustments
-

Professional and Institutional Extensions

- Legal chambers, academic institutions, and research organizations
 - Primary alignment with executive assistance and operational support roles
 - Engaged as function-specific extensions under shared standards of professionalism and reliability
-

Decision-Maker Profiles

Category A — Small Practices (1–3 Providers)

Decision-maker profile

- Physician-owner
- Direct involvement in daily operations

Decision drivers

- Patient experience
- Professional reputation
- Reliability and interpersonal quality

Remote readiness characteristics

- Initially cautious
 - Openness increases with demonstrated consistency and professionalism
-

Category B — Medium Practices (3–5 Providers)

Decision-maker profile

- Physician-owner or managing partner
- Early-stage administrator or operations lead

Decision drivers

- Operational stability during early expansion
- Workflow consistency across locations or services

Remote readiness characteristics

- Evaluated on integration with existing workflows
 - Preference for teams that align with practice culture and communication style
-

Category D — Enterprise Practices (10+ Providers)

Decision-maker profile

- Operations leadership

- Senior management or finance-aligned roles

Decision drivers

- Continuity and accountability
- Predictable delivery and reporting

Remote readiness characteristics

- Supported through:
 - Structured reporting
 - Performance visibility
 - Consistent delivery over time
-
