

2. Dental Practices

ICP Summary

Dental practices are a high-fit expansion vertical because their workflows closely resemble medical practice operations: scheduling, recall, chart preparation, insurance coordination, patient communication, treatment plan follow-up, documentation uploads, and billing support. The Virtual Dental Assistant JD directly maps to dental charting, treatment plan tracking, documentation upload, Dentrix/Open Dental/Eaglesoft workflows, recall support, and provider coordination.

Best-Fit Dental Segments

ICP Tier	Practice Type	Provider / Location Profile	Fit Level	Recommended Motion
Dental A	Solo / small owner-led dental practice	1–2 dentists, 1 location	High	Single-seat entry
Dental B	Growth-stage dental practice	2–6 dentists, 1–3 locations	Very High	Single-seat, then function expansion
Dental C	Specialty dental office	Ortho, perio, endo, oral surgery, pediatric dentistry	Selective High	Scoped function
Dental D	DSO / multi-site group	5+ locations or corporate management	Opportunistic	Structured team or account-based

Ideal Customer Profile — Dental A/B

Primary decision-maker: Dentist-owner, managing partner, office manager, practice administrator.

Operational pain: Front desk overload, hygiene recall gaps, treatment plan follow-up delays, insurance verification backlog, incomplete charts, unworked pending treatment lists, poor documentation consistency.

Remote readiness: Already uses Dentrix, Open Dental, Eaglesoft, Curve, CareStack, Weave, NexHealth, Solutionreach, Modento, RevenueWell, or similar dental software.

Budget maturity: Can justify one remote assistant against local front desk, treatment coordinator, or admin wages.

Primary buyer psychology: Wants calmer daily operations without losing patient relationship quality.

Role Mapping

H& Jobs Role	Dental Use Case	Fit
Virtual Dental Assistant	Chart prep, treatment plan documentation, x-ray/form uploads, recall list support, internal task routing	Primary
Virtual Medical Scheduler / Receptionist Adaptation	Dental appointment scheduling, confirmations, cancellations, new patient intake, recall outreach	Primary
Patient Care Coordinator Adaptation	Insurance verification, prior authorization where applicable, referral coordination, patient responsibility communication	Secondary
Medical Billing Coordinator Adaptation	Dental claims support only if trained on CDT codes, dental payer portals, EOBs, ERA/EOB posting, denial follow-up	Conditional
Executive Assistant	Owner calendar, vendor coordination, meeting notes, expansion admin	Optional
HR & Payroll Assistant	Multi-location staff recordkeeping, payroll prep, onboarding documentation	Optional

The scheduler role is relevant because the current VMS JD already covers phone handling, appointment scheduling, demographic and insurance updates,

reminders, recall workflows, and multi-provider scheduling. The billing role can be adapted only with dental-specific training because the current MBC JD is medical-claims oriented and references ICD/CPT/HCPCS rather than CDT coding.

High-Intent Buying Triggers

Trigger	Interpretation
"Our front desk is overwhelmed"	Strong entry point for scheduler / recall support
"Treatment plans are not being followed up"	Strong VDA / treatment coordinator support fit
"We are adding another hygienist or provider"	Scheduling and documentation volume will rise
"We are opening a second location"	Category B growth-stage account
"Insurance verification is slowing appointments"	PCC-style insurance support possible
"We use Dentrix/Open Dental but tasks sit undone"	Remote readiness likely strong

Dental Disqualification Rules

Disqualify or defer dental practices that:

- Want remote staff to provide clinical judgment, diagnose, explain treatment necessity beyond approved scripts, or replace chairside assistants.
- Use paper-only workflows with no secure remote access.
- Cannot identify whether the first seat is for scheduling, charting, treatment plan follow-up, or claims.
- Expect one assistant to handle phones, billing, treatment coordination, posting, insurance, and marketing without phased scoping.
- Demand dental billing without agreeing to dental-specific payer and CDT training.

Florida Launch Priority — Dental

Highest priority counties/metros:

1. South Florida: Miami-Dade, Broward, Palm Beach
2. Tampa Bay: Hillsborough, Pinellas, Pasco
3. Orlando / Central Florida: Orange, Seminole, Osceola
4. Jacksonville / North Florida: Duval, St. Johns, Clay
5. Southwest Florida: Lee, Collier, Sarasota, Manatee
