

H& Virtuals - ICP Definitions

This document defines the **Ideal Customer Profile (ICP)** for H& Virtuals. It outlines the types of practices and organizations that align most naturally with our operational model, service philosophy, and long-term vision, and provides a shared reference for how we think about fit, readiness, and engagement.

1. Medical Practices

2. Dental Practices

3. Assisted Living Facilities / Nursing Homes

4. Hotels / Resorts

5. MedSpa / Spa / Wellness Facilities

4. Hotels / Resorts

Universal ICP Qualification Model

Core Fit Criteria

A target account is ICP-aligned when it meets the following conditions:

Dimension	Required Signal
Operational pain	Clear admin, scheduling, documentation, communication, billing, follow-up, or back-office burden
Decision-maker access	Owner, administrator, practice manager, operations leader, GM, director, or managing partner can approve or influence spend
Remote readiness	Willing to provide system access, task definitions, escalation rules, and communication cadence
Role clarity	Need can be translated into one defined H& Jobs role or a narrow function
Budget maturity	Can support a recurring monthly seat cost without treating the role as a one-time

Dimension	Required Signal
	project
Compliance maturity	Understands that remote staff perform non-clinical, administrative, or coordination work only
Growth or stability need	Either scaling, understaffed, operationally strained, or trying to stabilize service quality

Universal Disqualifiers

An account should be disqualified or deferred when:

Disqualifier	Reason
Wants remote staff to perform licensed clinical work	Delivery and compliance risk
Cannot define daily tasks	High risk of failed placement
No clear system access or workflow ownership	Remote talent cannot execute reliably
Owner expects "cheap labor" without supervision model	Misaligned with managed workforce positioning
No decision-maker present after qualification	Sales cycle likely stalls
Highly chaotic operation with no task owner	Remote support amplifies ambiguity
Requires on-site physical tasks	Outside H& Jobs delivery model
Refuses documentation, call logging, or performance review	Cannot manage quality

Remote Readiness Characterization

Type 1 — Remote-Naive Practices

- These organizations have **little to no prior exposure to remote staffing** and typically operate through fully on-site teams.

- Their expectations are shaped by traditional in-person workflows, and familiarity with remote collaboration develops gradually through experience.
-

Type 2 — Remote-Curious Practices

- These practices are aware of remote staffing models and have begun exploring them through informal research or peer references.
 - They are actively forming opinions about feasibility, quality, and fit, but have not yet committed to implementation.
-

Type 3 — Remote-Exploring Practices < Primary

- These organizations are actively evaluating remote solutions and may be comparing vendors, roles, or service structures.
 - They are seeking clarity on execution, reliability, and how remote teams integrate into daily operations.
-

Type 4 — Remote-Experienced Practices

- These practices have prior experience working with remote staff and have established expectations around performance and accountability.
 - Their readiness is shaped by outcomes observed over time, with an emphasis on consistency, visibility, and dependable execution.
-

Geographic Focus

- Operating geography: United States
- Initial focus market: Florida

Rationale for Florida focus

- Existing professional relationships and local contacts
 - Familiarity with practice environments and operating norms
 - Faster trust formation and earlier placements
 - Tighter feedback loops for onboarding and service refinement
-

Strategic intent

- Establish depth of execution in an initial market
- Use Florida as a stable operational base for phased geographic expansion

ICP Scoring Framework

Use this scorecard before moving a prospect to demo or role definition.

Dimension	Weight	Pass Signal
Vertical fit	15	Falls into defined ICP segment
Operational pain	20	Clear pain tied to admin, scheduling, documentation, communication, billing, CRM, or compliance
Decision-maker access	15	Owner/operator/administrator/GM/practice manager engaged
Remote readiness	15	Uses digital systems and can grant secure access
Role clarity	15	First role can be defined in writing
Budget maturity	10	Accepts recurring monthly support model
Compliance boundary clarity	10	Understands non-clinical / non-physical role limits

Score interpretation

Score	Classification	Action
85–100	Strong ICP	Advance to demo / role definition
70–84	Qualified with conditions	Advance if role scope is narrow
55–69	Weak / exploratory	Nurture or defer
Below 55	Poor fit	Disqualify
